Call QA • Reporting • Automation

Main Heading

Call QA & Automation Specialist for Pay-Per-Call Campaigns

Subheading

I help teams review calls, verify sales and dispositions, track buyer and publisher performance, identify CRM issues, and automate daily QA reporting using n8n, Google Sheets, Slack, and call tracking platforms.

Short Value Statement

My focus is simple: clean calls, accurate reports, faster workflows, and better campaign decisions.

Quick Highlight Cards

Call QA Review

I review call recordings and transcripts to identify clean calls, flagged calls, sales, no conversation, complaints, and compliance risks.

Reporting & Metrics

I prepare buyer and publisher reports using total calls, billable calls, sales, revenue, payout, RPC, CPC, CPA, duplicates, no routes, and no connects.

Automation Workflows

I build n8n workflows that reduce manual work by importing call data, processing QA results, updating sheets, and sending Slack reports.

CRM / Tracker QA

I identify issues like missing revenue, wrong billable status, caller ID mismatch, daily cap problems, and paused campaigns still receiving calls.

Small Footer Line for Slide

Built for teams that need accurate call QA, clean reporting, and reliable automation.

2. Menu Button: Expertise

Slide Name: What I Do

Main Heading

What I Do

Subheading

I connect call quality, campaign performance, reporting, and automation into one clean workflow so teams can make faster and better decisions.

Card 1: Call QA Review

I review call recordings and transcripts to check call quality, caller intent, agent handling, and final call outcome.

Key focus:

- Clean calls
- Flagged calls
- No conversation
- Wrong number
- Complaints
- Prospect frustration
- Sales validation
- Compliance risks

Card 2: Sales & Dispo Verification

I verify whether the call outcome is accurate and whether the call should be treated as sale, review, not payable, or escalated.

Key focus:

- Sale

- RC
- NC
- Call back
- Existing policy
- Prospect hang up
- Wrong number
- Review / escalate

Card 3: Buyer & Publisher Reporting

I create performance reports that help teams understand which buyers and publishers are performing well and which sources need attention.

Key metrics:

- Total calls
- Billable calls
- Billable percentage
- Sales
- Revenue
- Payout
- RPC
- CPC
- CPA
- Duplicates

Card 4: Campaign Quality Monitoring

I monitor traffic quality and highlight the issues that can hurt campaign performance or buyer trust.

Common flags:

- Incentive traffic
- No meaningful conversation
- Misleading ad
- Digital outreach complaint
- Call source issue
- Wrong vertical
- Low quality publisher traffic

Card 5: CRM / Call Tracker QA

I check the data side of call campaigns and report issues clearly when CRM or tracker numbers do not match.

Examples:

- Missing revenue
- Missing billable status
- Caller ID not showing
- Cap not enforcing
- Paused campaign still receiving calls
- CSV missing required fields

Card 6: n8n Workflow Automation

I build workflows that help teams reduce manual checking and generate repeatable reports.

Automation examples:

- CSV import
- Google Sheets update
- AI QA fields
- Slack daily report
- CPA report summary
- Error tracking
- Batch processing

Slide Closing Line

I do not just review calls. I help connect QA, reporting, tracking, and automation into one practical system.

3. Menu Button: Tools

Slide Name: Tools I Work With

Main Heading

Tools I Work With

Subheading

I use call tracking, reporting, automation, and communication tools to keep QA work organized, trackable, and easy for teams to act on.

Tool Categories

Automation

- n8n
- OpenAI / AI QA
- Whisper / Transcription Logic

Reporting

- Google Sheets
- Excel
- PDF Reports
- CSV Exports

Communication

- Slack
- Email Updates
- Team Follow-Ups

Call Tracking & CRM

- CallGrid
- Retreaver
- Techaxy CRM / Call Tracker
- Campaign Dashboards

File & Data Management

- Google Drive
- Structured Sheets
- Report Archives
- QA Data Logs

Tool Section Short Text

These tools help me turn raw call data into useful QA decisions, performance reports, and team-ready updates.

Suggested Tool Logo Labels

Use these logo names on frontend:

- n8n
- Google Sheets

- Slack
- CallGrid
- Retreaver
- Techaxy
- OpenAI
- Whisper
- CSV
- PDF Reports
- Google Drive
- Excel

Small Slide Note

Tool logos should appear clean and professional. On page load, each logo should spin once smoothly. On desktop hover, each logo should slightly zoom out, spin once, and return to its normal position.

4. Menu Button: Process

Slide Name: Work Process

Main Heading

My Work Process

Subheading

I follow a structured QA and reporting process so every call, report, and issue is handled with accuracy and context.

QA Review Process

Step 1: Export Call Data

I start with call exports from the CRM, CallGrid, Retreaver, or tracker system.

Step 2: Organize the Raw Data

I structure the data inside Google Sheets with fields like date, call ID, campaign, buyer, source, billable status, revenue, payout, recording URL, and QA fields.

Step 3: Review Calls or Transcripts

I check the recording or transcript to understand caller intent, conversation quality, agent handling, and call outcome.

Step 4: Assign QA Result

I mark the call as clean, flagged, sale, review, not payable, or escalated based on the actual call quality.

Step 5: Identify the Reason

I add the reason clearly, such as no conversation, wrong number, complaint, incentive traffic, misleading ad, existing policy, or call back.

Step 6: Prepare Summary

I prepare a clean report showing total reviewed calls, clean calls, flagged calls, sales, risk levels, and top issues.

Step 7: Send Team Update

I send the report or summary to the team through Slack, email, or PDF format.

Step 8: Follow Up on Issues

I highlight buyer, publisher, or CRM issues that need attention.

Short Version for Slide Design

Use this if the slide has limited space:

Export Calls → Structure Data → Review Calls → Mark QA Result → Flag Issues → Create Report → Send Update → Follow Up

Slide Closing Line

The goal is not just to review calls. The goal is to give the team clear answers they can act on.

5. Menu Button: Case Studies

Slide Name: Case Studies

Main Heading

Case Studies

Subheading

Here are examples of how I apply QA, reporting, and automation in real campaign workflows.

Case Study 1: Call QA Automation Workflow

Problem

Manual call QA and reporting was taking too much time. The team needed a faster way to review call batches, identify flagged calls, and send daily summaries.

Solution

I helped build a workflow using call exports, Google Sheets, n8n, AI QA logic, and Slack reporting.

Workflow

CSV Export → Google Sheets → Transcript / AI QA → QA Result → Flag Type → Slack Summary

Result

- Faster daily QA processing
- Better visibility on flagged calls
- Clearer daily summaries
- Less manual reporting work
- Easier follow-up on bad traffic and campaign issues

Suggested Card Button

[View Workflow](#)

Case Study 2: Buyer & Publisher CPA Reporting

Problem

The team needed clear performance visibility across buyers and publishers, especially around sales, billable calls, revenue, payout, and CPA.

Solution

I created structured reports showing buyer and publisher performance in a simple decision-ready format.

Report Metrics

- Total calls
- Billable calls
- Billable percentage
- Sales
- Revenue
- Payout
- RPC
- CPC
- CPA
- Duplicate calls
- No routes
- No connects

Result

Helped identify:

- Buyers with zero sales
- Publishers with quality issues
- High CPA sources
- Duplicate call problems
- Low volume sources
- Best-performing buyers and vendors

Suggested Card Button

[View Sample Report](#)

Case Study 3: CRM / Call Tracker Issue Reporting

Problem

Some campaign data did not match correctly inside the tracker or CRM. Issues included missing revenue, caller ID mismatch, cap problems, and paused campaigns still receiving calls.

Solution

I checked the call data, verified tracker behavior, compared fields, and reported the issue clearly to the relevant team.

Example Issues Found

- Billable call showing zero revenue
- Caller ID missing on vendor side
- Campaign paused but still receiving traffic
- Daily cap not enforcing
- CSV missing important columns
- CRM and tracker mismatch

Result

Helped the team detect reporting gaps, tracking issues, and campaign setup problems faster.

Suggested Card Button

[View Issue Example](#)

Slide Closing Line

Each case study is focused on practical business impact: cleaner data, better QA, faster reporting, and stronger campaign control.

Slide Closing Line

Reports are designed for clarity, accuracy, and fast decision-making.

7. Menu Button: Automation

Slide Name: Automation Workflow

Main Heading

Automation Workflow

Subheading

I build automation workflows that reduce repetitive QA work and turn raw call exports into structured reports and team-ready updates.

Main Workflow Line

Call Export → Google Sheets → n8n Processing → AI QA Fields → Report Summary → Slack Update

Workflow Block 1: Data Import

Call data is exported from CRM, CallGrid, Retreaver, or tracker systems and imported into a structured Google Sheet.

Fields can include:

- Date
 - Call ID
 - Campaign
 - Buyer
 - Source
 - Billable status
 - Revenue
 - Payout
 - Duration
 - Recording URL
 - Import batch
-

Workflow Block 2: QA Processing

The workflow processes call data and prepares QA fields for review or automated analysis.

QA fields can include:

- Transcript
 - AI disposition
 - AI sale status
 - QA result
 - Flag type
 - QA reason
 - Risk level
 - Processing status
-

Workflow Block 3: Reporting Logic

The workflow summarizes performance and quality signals from the call batch.

Summary can include:

- Total QA reviewed
 - Sales
 - Clean calls
 - Flagged calls
 - Not payable
 - Review
 - Escalate
 - Top issue
 - Risk summary
 - Campaign/source breakdown
-

Workflow Block 4: Slack / Team Update

The final report can be sent to Slack or shared with the team in a clean format.

Example outputs:

- Daily QA Dispo Report
 - CPA Summary
 - Flagged Call Alerts
 - Campaign Quality Summary
 - Buyer/Publisher Performance Update
-

Benefits

- Less manual reporting
- Faster QA summaries
- Consistent report format
- Better visibility on bad traffic
- Easier follow-up with buyers and publishers
- Better campaign control

Slide Closing Line

Automation does not replace QA judgment. It makes the QA process faster, cleaner, and easier to scale.

8. Menu Button: Why Me

Slide Name: Why Hire Me

Main Heading

Why Hire Me

Subheading

I understand the full workflow behind call campaigns: the call quality, the tracking data, the buyer and publisher performance, and the reporting system behind it.

Reason 1: I Understand Call QA Beyond Basic Listening

I do not only listen to calls and mark them clean or bad. I check caller intent, conversation quality, transfer quality, compliance signals, and whether the final outcome makes business sense.

Reason 2: I Know Campaign Reporting Metrics

I understand the numbers that matter in pay-per-call campaigns, including billable calls, sales, revenue, payout, RPC, CPC, CPA, duplicates, no routes, and no connects.

Reason 3: I Can Find Tracking and CRM Issues

I can identify when the tracker or CRM data does not look right, such as missing revenue, wrong billable status, caller ID mismatch, cap issues, or paused campaigns receiving calls.

Reason 4: I Can Automate Repetitive Work

I can build n8n workflows that help reduce manual reporting by processing call data, updating sheets, creating QA summaries, and sending team updates.

Reason 5: I Communicate Issues Clearly

I prepare simple, direct updates that help managers, buyers, publishers, and team members understand what happened and what needs to be fixed.

Short Strong Statement

If you need someone who can review calls, understand campaign data, build reports, and improve the workflow with automation, I can help.
